### Calculation policy: Addition

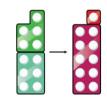

Key language: sum, total, parts and wholes, plus, add, altogether, more, 'is equal to' 'is the same as'.

Concrete	Pictorial	Abstract
Combining two parts to make a whole (use other resources too e.g. eggs, shells, teddy bears, cars).	Children to represent the cubes using dots or crosses. They could put each part on a part whole model too.	4+3=7 Four is a part, 3 is a part and the whole is seven.
Counting on using number lines using cubes or Numicon.	Abar model which encourages the children to count on rather than count all.	The abstract number line: What is 2 more than 4? What is the sum of 2 and 4? What is the total of 4 and 2? 4 + 2

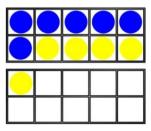

Regrouping to make 10; using tenframes and counters/cubes or using Numicon.

6 + 5

Children to draw the ten frame and counters/cubes.

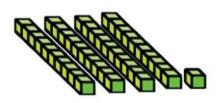

Children to develop an understanding of equality e.g.

$$6 + \Box = 11$$
  
 $6 + 5 = 5 + \Box$   
 $6 + 5 = \Box + 4$ 

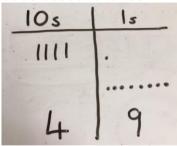

TO + O using base 10. Continue to develop understanding of partitioning and place value.

41 + 8

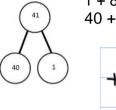

Children to represent the base 10 e.g. lines for tens and dot/crosses for ones.

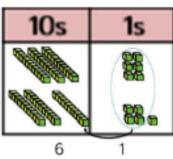

41 + 8

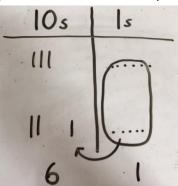

1 + 8 = 940 + 9 = 49

**TO + TO using base 10.** Continue to develop understanding of partitioning and place value. 36 + 25

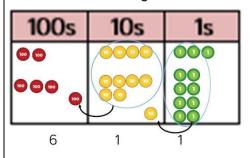

Children to represent the base 10 in a place value chart.

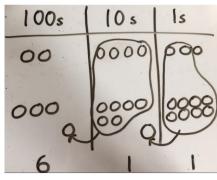

Looking for ways to make 10.

Formal method: +25 61 Use of place value counters to add HTO + TO, HTO + HTOetc. When there are 10 ones in the 1s column-we exchange for 1 ten, when there are 10 tens in the 10s column- we exchange for 1 hundred.

Children to represent the counters in a place value chart, circling when they make an exchange.

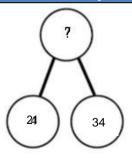

243

2.43

+3.68

#### Conceptual variation; different ways to ask children to solve 21 + 34

	•	?	
21		34	

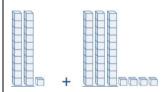

Word problems:

In year 3, there are 21 children and in vear 4, there are 34 children. How many children in total?

$$21 + 34 = 55$$
. Prove it

21

Calculate the sum of twenty-one and thirty-four.

Missing digit problems:

	<u>'</u>
10s	1s
10 10	0
10 10 10	?
?	5 -

## Calculation policy: Subtraction

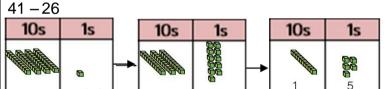

Key language: take away, less than, the difference, subtract, minus, fewer, decrease.

Concrete	Pictorial	Abstract
Physically taking away and removing objects from a whole (ten frames, Numicon, cubes and other items such as beanbags could be used).	Children to draw the concrete resources they are using and cross out the correct amount. The bar model can also be used.	4-3=
4 − 3 = 1	Ø Ø Ø O	3 ?
Counting back (using number lines or number tracks) children start with 6 and count back 2.  6 - 2 = 4	Children to represent what they see pictorially e.g.	Children to represent the calculation on a number line or number track and show their jumps. Encourage children to use an empty number line
1 2 3 4 5 6 7 8 9 10	12345678910	0 1 2 3 4 5 6 7 8 9 10

Represent the base 10 pictorially, remembering to show the exchange.

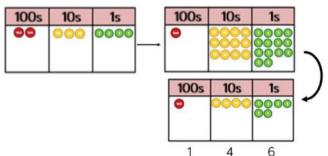

Formal column method. Children must understand that when they have exchanged the 10 they still have 41 because 41 = 30 + 11.

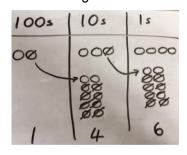

**Column method** using place value counters.

$$234 - 88$$

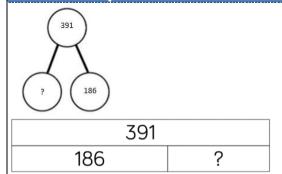

Represent the place value counters pictorially; remembering to show what has been exchanged.

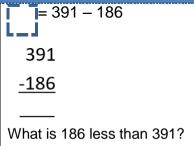

Formal column method. Children must understand what has happened when they have crossed out digits.

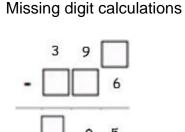

#### Conceptual variation; different ways to ask children to solve 391 - 186

Raj spent £391, Timmy spent £186. How much more did Raj spend?

Calculate the difference between 391 and 186.

## Calculation policy: Multiplication

Key language: double, times, multiplied by, the product of, groups of, lots of, equal groups.

Concrete	Pictorial	Abstract
Repeated grouping/repeated addition $3 \times 4$	Children to represent the practical resources in a picture and use a bar model.	$3 \times 4 = 12$
4 + 4 + 4	·	4 + 4 + 4 = 12
There are 3 equal groups, with 4 in each group.	88 88 88	
Number lines to show repeated groups- 3 × 4	Represent this pictorially alongside a number line e.g.:	Abstract number line showing three jumps of four.
Cuisenaire rods can be used too.	000010000100001	3 × 4 = 12

#### Use arrays to illustrate commutativity counters and other Children to represent the arrays pictorially. Children to be able to use an array to write a obiects can also be used. range of calculations e.g. $2 \times 5 = 5 \times 2$ 000 $10 = 2 \times 5$ 00000 $5 \times 2 = 10$ 2 + 2 + 2 + 2 + 2 = 1010 = 5 + 52 lots of 5 5 lots of 2 Partition to multiply using Numicon, base 10 or Cuisenaire Children to represent the concrete manipulatives Children to be encouraged to show the steps 4 x 15 rods. pictorially. they have taken. 1 $4 \times 15$ 10 5 105 15 $10 \times 4 = 40$ $5 \times 4 = 20$ 40 + 20 = 60A number line can also be used Formal column method with place value counters Children to represent the counters pictorially. Children to record what it is they are doing (base 10 can also be used.) $3 \times 23$ to show understanding (e.g. 15 10s partitioned method; grid method.) 10s 1s 000 00 20 X $3 \times 23$ 000 000 00 3 60 20 3 000 000 $3 \times 20 = 60$ 60 $3 \times 3 = 9$

9

6

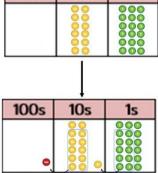

3

9

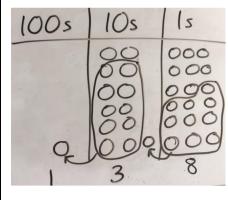

60 + 9 = 69

Children to represent the counters/base 10. pictorially E.g. the image below.

Formal written method 6 x 23

138

When children start to multiply 3d x 3d and 4d x 2d etc., they should be confident with the abstract:

To get 744 children have solved  $6 \times 124$ . To get 2480 they have solved  $20 \times 124$ .

124 x 26 24 (6 x 4) 120 (6 x 20) 600 (6 x 100) 80 (20 x 4)

400 (20 x 20) 2000 (20 x 100)

3224

Answer: 3224

#### Conceptual variation; different ways to ask children to solve 6 x 23

23 23 23 23 23

?

Mai had to swim 23 lengths, 6 times a week.

How many lengths did she swim in one week?

With the counters, prove that 6 x 23 = 138

Find the product of 6 and 23

 $6 \times 23 =$ 

 $= 6 \times 23$ 

23

× 23

What is the calculation? What is the product?

100s	10s	1s
3	000000	000

## Calculation policy: Division

Key language: share, group, divide, divided by, half.

Concrete	Pictorial	Abstract
Sharing using a range of objects. 6 ÷ 2	Represent the sharing pictorially.	$6 \div 2 = 3$
	$(\cdot)$	3 3
		Children should also be encouraged to use their 2 times tables facts.
	?	
Repeated subtraction using Cuisenaire rods above a ruler. 6 ÷ 2	Children to represent repeated subtraction pictorially.	Abstract number line to represent the equal groups that have been subtracted.
-2 -2 -2 0 1 2 3 4 5 6 7 8 9 10	0000000	-2 -2 -2 0 1 2 3 4 5 6 3 groups
3 groups of 2		

2d÷1d with remainders using lollipop sticks. Cuisenaire rods, above a ruler can also be used.

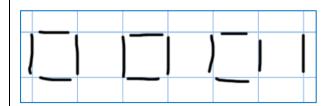

13 ÷ 4

Use of lollipop sticks to form wholes-squares are made because we are dividing by 4.

There are 3 whole squares, with 1 left over.

Children to represent the lollipop sticks pictorially.

There are 3 whole squares, with 1 left over.

13 ÷ 4 – 3 remainder 1

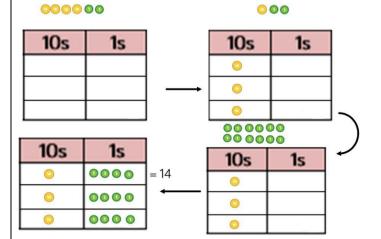

Children should be encouraged to use their times table facts; they could also represent repeated addition on a number line.

'3 groups of 4, with 1 left over'

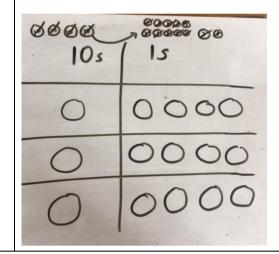

Sharing using place value counters.

$$42 \div 3 = 14$$

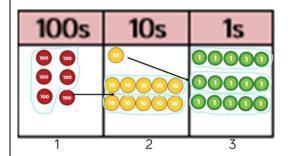

Children to represent the place value counters pictorially.

Children to be able to make sense of the place value counters and write calculations to show the process.

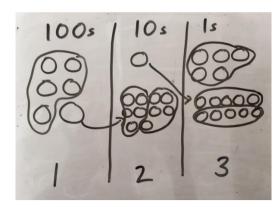

$$42 \div 3$$
  
 $42 = 30 + 12$   
 $30 \div 3 = 10$   
 $12 \div 3 = 4$   
 $10 + 4 = 14$ 

#### Short division using place value counters to group. 615 ÷ 5

- 1. Make 615 with place value counters.
- 2. How many groups of 5 hundreds can you make with 6 hundred counters?
- 3. Exchange 1 hundred for 10 tens.
- 4. How many groups of 5 tens can you make with 11 ten counters?
- 5. Exchange 1 ten for 10 ones.
- 6. How many groups of 5 ones can you make with 15 ones?

Represent the place value counterspictorially.

Children to the calculation using the short division scaffold.

#### Long division using place values counters

2544 ÷ 12

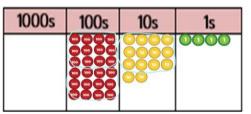

1000s	100s	10s	1s
	9000	0000	0000
	<b>©</b>		
	1	_	_

1000s 100s 10s 1s

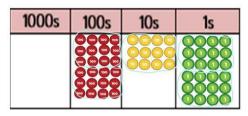

We can't group 2 thousands into groups of 12 so will exchange them.

We can group 24 hundreds into groups of 12 which leaves with 1 hundred.

	212		
12	2544		
_	1200	(x100)	1 x 12 = 12
•	1344		$2 \times 12 = 24$
	1200	(x100)	5 x 12 = 60
	144		10 x 12 = 120
_	120	(x10)	20 x 12 = 240
-	24		50 x 12 = 600
_	24	(x2)	100 x 12 = 1200
-	0		
		-	

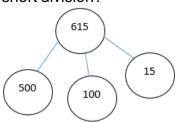

After exchanging the hundred, we have 14 tens. We can group 12 tens into a group of 12, which leaves 2 tens.

After exchanging the 2 tens, we have 24 ones. We can group 24 ones into 2 group of 12, which leaves no remainder.

### Conceptual variation; different ways to ask children to solve 615 ÷ 5

Using the part whole model below, how can you divide 615 by 5 without using short division?

I have £615 and share it equally between 5 bank accounts. How much will be in each account?

615 pupils need to be put into 5 groups. How many will be in each group?

5 615

615 ÷ 5 =

$$[ -1] = 615 \div 5$$

What is the calculation? What is the answer?

100s	10s	1s
100 100	10 10 10 10 10	00000 00000 00000

# Calculation policy: Guidance

	EYFS/Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
	Combining two parts to make a whole: part whole model.	Adding three single digits.	Column method-regrouping.	Column method- regrouping.	Column method- regrouping.	Column method- regrouping.
Addition	Starting at the bigger number and counting on- using cubes.  Regrouping to make 10 using ten frame.	Use of base 10 to combine two numbers.	Using place value counters (up to 3 digits).	(up to 4digits)	Use of place value counters for adding decimals.	Abstract methods.  Place value counters to be used for adding decimal numbers.
	Taking away ones	Counting back	Column method with regrouping.	Column method with regrouping.	Column method with regrouping.	Column method with regrouping.
